Contributions

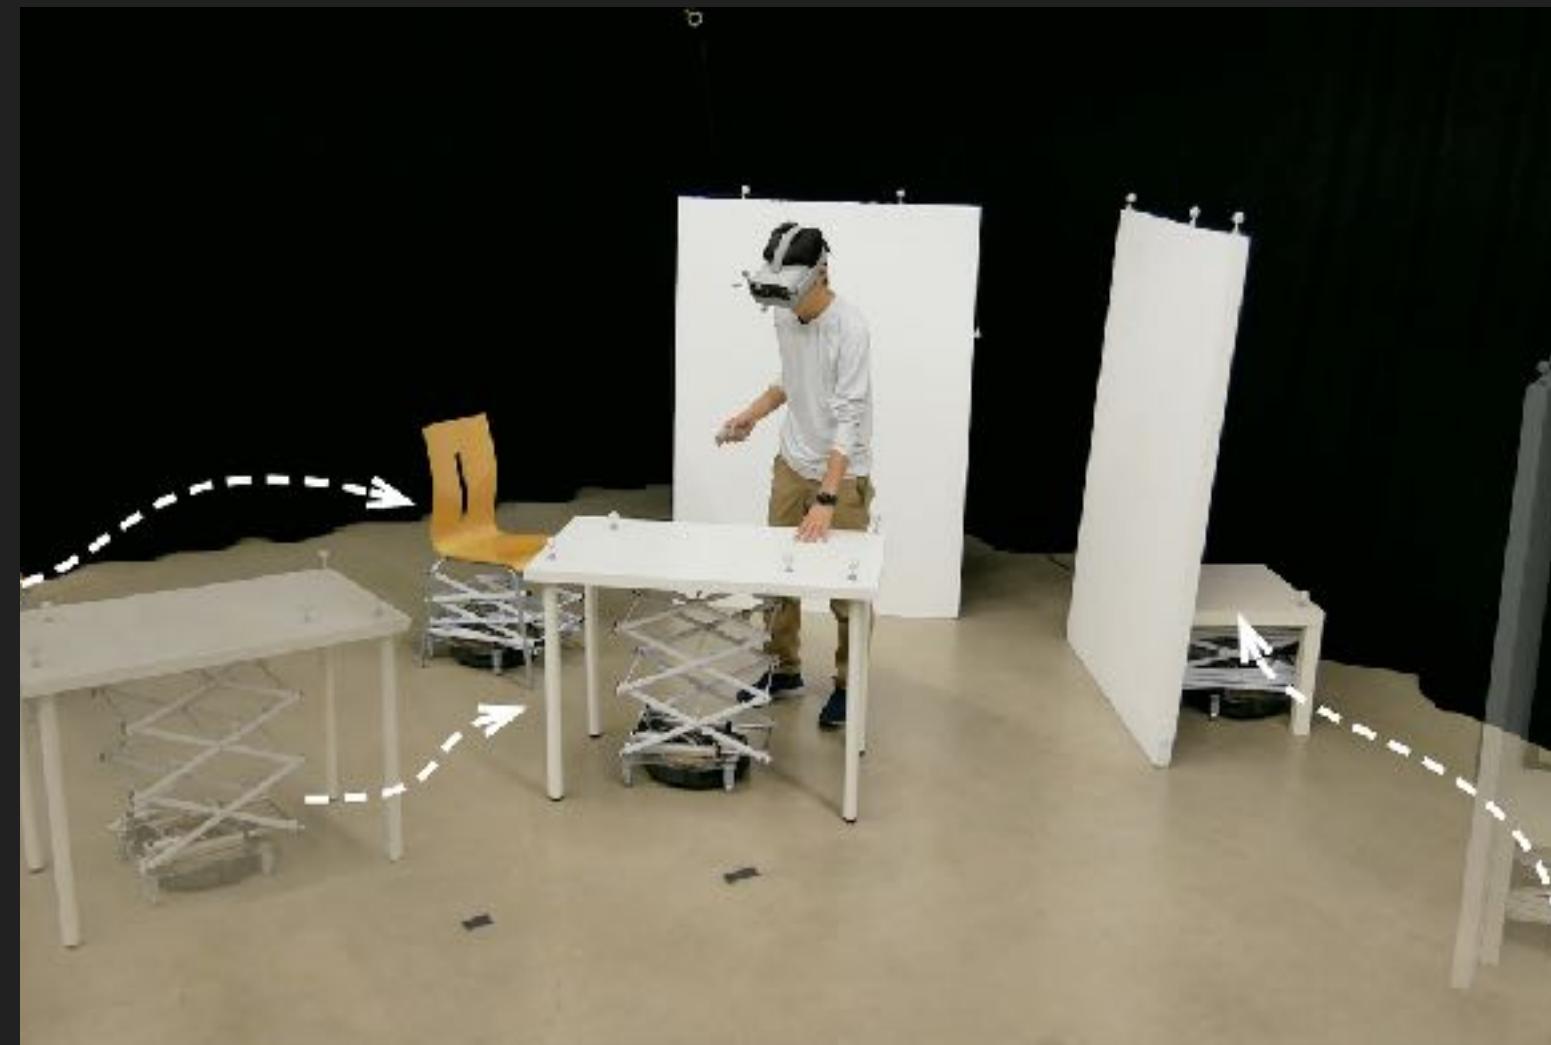

1. A novel concept of **distributed encountered-type haptics** for VR, enabled by swarm robots.
2. A hardware and software implementation of **HapticBots**, including a highly robust extendable mechanical structure.
3. **Applications** and **user evaluation** to demonstrate the effective continuous haptic illusions.

Limitation:

1. **Fixed interaction area**: significantly increase costs if making it large
2. **Not graspable**: pins are fixed on the base, which also limits lateral movement
3. **Not deployable**: requires heavy, large, and complex mechanical systems

Shape Display based Haptics

Swarm Robotic based Haptics

Limitations of Shape Display

- 1. Fixed interaction area
- 2. Not graspable
- 3. Not deployable

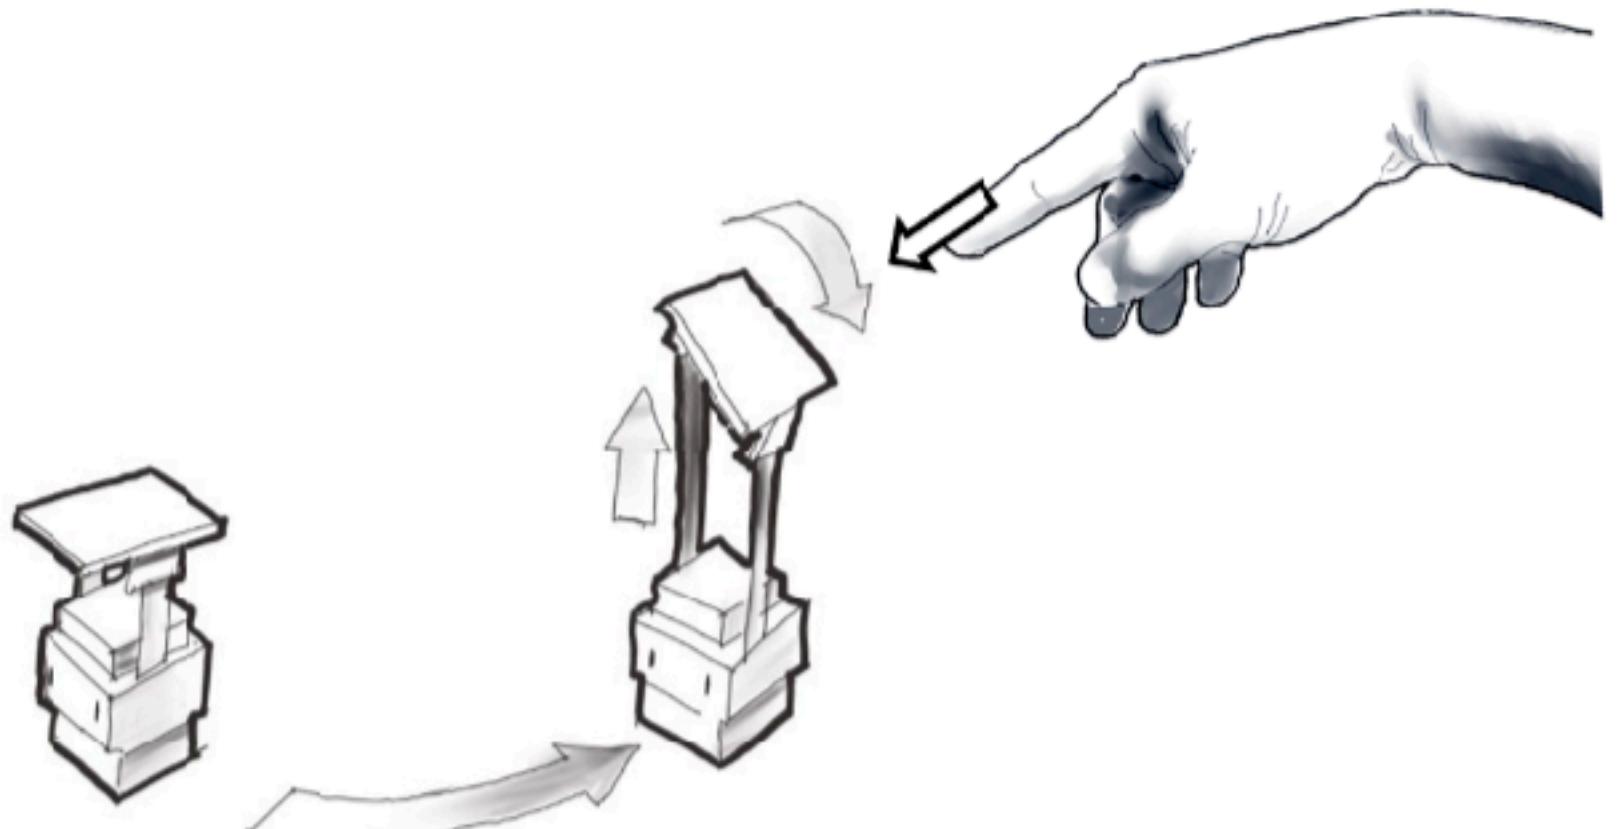

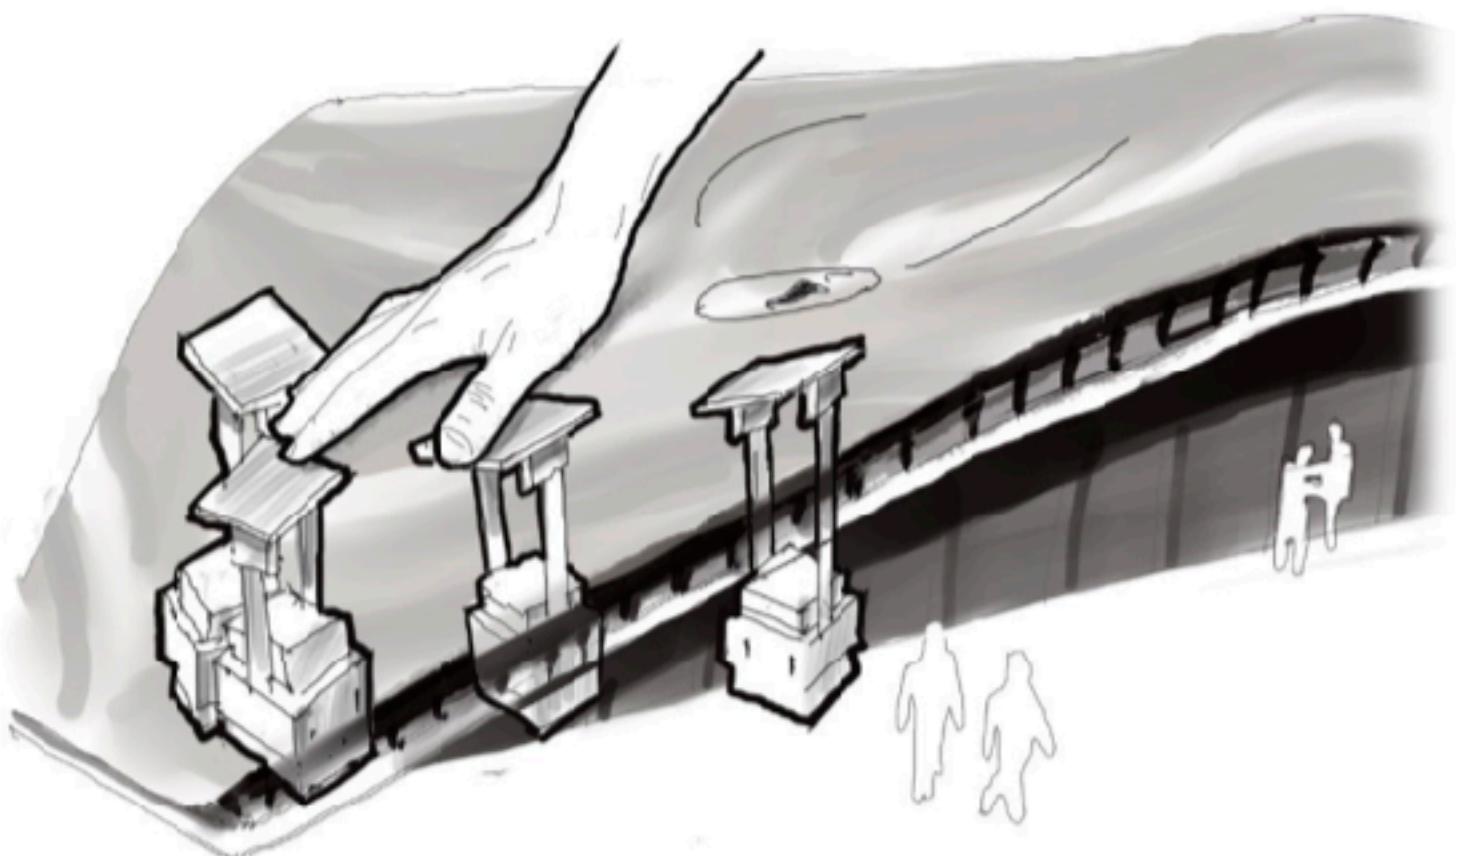

→

Our Approach:

- 1. **Large and flexible**
- 2. **Graspable and portable**
- 3. Easily **deployable**
